

Shoreline Survey requirements for statement from surveyor:

When the building permit Conditions include "Field Survey & Certification for Shoreline Building Height" requirement, the land surveyor is to include the following items in their report or statement to the City.

1. Building permit number.
2. Site Address.
3. Survey highest peak of roof framing.
4. **When the proposed height exceeds 34.5 ft.:** State additional height proposed for thickness of roofing materials (obtain from project manager).
5. Provide height of structure above Average Existing Grade (AEG) shown on the approved site plan. The calculation is (referring to line item numbers above) (#3 + #4 [if applicable]) - AEG = height of structure.
6. **When the proposed height exceeds 34.5 ft. above AEG:** an additional survey will be required once all roofing material is installed, prior to final inspection. Final statement of building height is required to be presented to the inspector prior to final inspection.
